

Study of New Fluorosulphate Materials for Lithium Ion Battery

Filesize: 5.46 MB

Reviews

Basically no words to clarify. Of course, it is perform, still an amazing and interesting literature. Its been printed in an exceptionally basic way which is only soon after i finished reading through this ebook where actually altered me, change the way i really believe.

LAP Lambert Academic Publishing Nov 2015, 2015. Taschenbuch. Book Condition: Neu. 220x150x6 mm. Neuware - In this book, synthesis, structural and electrochemical performances, especially kinetics of LiFeSO_4F are investigated. LiFeSO_4F powder was obtained through ionothermal and solid state methods. The properties of obtained powders were characterized by X-ray diffraction (XRD) and scanning electron microscope (SEM). The diffusion path of LiFeSO_4F was investigated through crystallography point of view. The concept of Li^+ hopping distance and anion window were used to determine the fastest diffusion path. First principle calculation data on activation energy was applied to derive the theoretical diffusion coefficient in the order of $10^{-15} \text{ cm}^2/\text{s}$. The apparent chemical diffusion coefficients (D) of lithium in the material were measured by cyclic voltammetry (CV), galvanostatic intermittent titration technique (GITT), electrochemical impedance spectroscopy (EIS) and potential relaxation technique (PRT) methods. Rate and cycling performance were studied with film and/or powder electrode. The effect of particle size to the electrochemical performance was studied. The reason of moisture sensitivity is proposed and tested. 100 pp. Englisch.
